SUMMARY

Game Developer with 4+ years of professional experience building mobile games in Unity and C# across idle, strategy, and survival genres. Skilled in gameplay systems, NPC AI, progression, UI integration, and performance optimization. Led small development teams, mentored junior developers, and iterated on publisher feedback and gameplay analytics. Experienced in both solo programming and team production, from prototyping through testing and release.

TECHNICAL SKILLS

Programming Languages C#, C++, Python, HLSL
Engines & Tools Unity, DirectX 11, Git, GitHub, Jira, GameAnalytics, Photon Fusion
Core Skills Gameplay Systems, NPC AI (FSMs), UI, Progression, Profiling, Shader Graph, ScriptableObjects, Save/Load Systems, Unity Editor Tools, Graphics and Shader programming

EXPERIENCE

Mid-Level Game Developer Feb 2025 — Present
Big Bang Studio LLC Dhaka, Bangladesh

- Mentored junior developers and interns through code reviews, debugging, and guidance on modular C# systems.
- Led small development teams, coordinated work with artists, and reviewed systems during publisher iterations.
- Led optimization work on loading times, build size, and runtime performance for mobile projects.

Game Developer Apr 2022 — Jan 2025
Big Bang Studio Ltd. Dhaka, Bangladesh

- Implemented gameplay, NPC AI, progression, and UI systems for Unity mobile games, from prototyping through publisher testing and release.
- Built NPC behaviors using finite state machines and integrated physics-based gameplay interactions.
- Created modular systems, Unity editor tools, and reusable features to support production across multiple games.
- Collaborated with programmers and artists using Git and shared task planning; resolved integration issues and prepared builds for testing and release.

FEATURED PROJECTS

Fight For World, Big Bang Studio LLC Google Play

- Implemented player controls, resource interactions, seven of 12 turret behaviors, and the end-of-world sequence in a mobile tower-defense and survival game.
- Built weapon and champion progression, equipment/gacha, rewards, currency, and main-menu UI systems.
- Integrated the existing skill tree into gameplay and handled save-data migration between versions.
- Used GameAnalytics findings to revise turret recommendations; built a feature-unlock system reused in four subsequent projects.

Wool Rush: Sheep Farm Empire, Big Bang Studio LLC Google Play

- Sole programmer in a three-person team for an idle farming game; built player interactions and production systems.
- Implemented data-driven quests, building upgrades, unlocks, currencies, and persistent save/load systems.
- Developed state-machine AI for sheep, helpers, and customers, with task priorities that respected player actions.
- Integrated UI, AdMob ads, in-app purchases, custom shaders, particle effects, and audio.

Idle Power City, Big Bang Studio LLC Google Play

- Built the initial prototype and later led a four-person team developing a mobile idle city-building game.
- Implemented building production, unlocks, upgrades, quests, and NPC state machines with helper task priorities.
- Created spline-based vehicle movement, Shader Graph effects, UI, currencies, and persistent save/load systems.

EDUCATION

Bachelor of Science in Computer Science and Engineering Jul 2024
Green University of Bangladesh, GPA: 3.6/4.0 Dhaka, Bangladesh

- Programming Secretary, Green University Computer Club.
- Participated in ICPC regional and other online and on-site programming contests.
